

Malik Salman

New York, NY | (248) 463-0799 | mksalmanpers@gmail.com | www.linkedin.com/in/MalikMal

EDUCATION

New York University, Tandon School of Engineering
MSE Urban Data Science, GPA: 3.9/4.0

New York, NY
May 2025

- Coursework: Applied Data Science, Disaster Risk Analysis, Causal Inference, Machine Learning for Cities, GIS,

University of Michigan, College of LSA
BS Interdisciplinary Physics, GPA: 3.5/4.0

Ann Arbor, MI
May 2023

- Coursework: Linear Algebra, Differential Equations, Urban Planning | Exchange Program: National University of Singapore

PROJECT EXPERIENCE

Cycling Behavior & Infrastructure Equity Analysis (NYU RUN Lab)

New York, NY

Methodological Lead

Sep 2024 – Jul 2025

- Designed and implemented a causal inference pipeline to quantify the effect of NYC bike lane investments on Citi Bike usage, processing millions of trip records alongside sociodemographic and spatial datasets.
- Built reproducible Python workflows for data cleaning and analysis; findings — that only protected lanes produce a measurable ridership increase, with effects absent in higher Black-resident areas — are documented in a [co-authored manuscript](#) under review at *npg Sustainable Mobility and Transport*.

Forsyth Street and Manhattan Bridge Corridor — Placemaking & Urban Change Documentation

New York, NY

Independent

Ongoing

- Developing a photography-based placemaking project along Forsyth Street and the Manhattan Bridge in Chinatown, documenting instances of placemaking, gentrification, infrastructure encroachment, and cultural persistence.
- Building a visual archive of streetscape change to communicate neighborhood transformation across design, planning, and public audiences.

Rail Corridor Reactivation — Ridership & Community Impact Analysis (QueensLink)

New York, NY

Team Co-Lead

Sep 2024 – May 2025

- Framed and led a planning engagement for a transit nonprofit evaluating reactivation of a dormant Queens rail corridor — navigating conflicting projections between client and MTA modeling, and developing findings into a public-facing narrative for affected communities and the agency that would ultimately have to fund the project.
- Built scenario-based demand models and geospatial analyses integrating ridership, demographic, and equity data across multiple route alternatives, translating outputs into route selection and investment prioritization recommendations for city planning and advocacy stakeholders; findings featured in [QueensLink's ridership report](#) (2026).

U.S. Open Economic Spillover Analysis (NYU RUN Lab)

New York, NY

Team Lead

Sep 2024 – Nov 2024

- Independently scoped and led a city-scale evaluation of the U.S. Open's neighborhood economic spillovers, structuring the problem, selecting methods, and managing the analysis from hypothesis through final deliverable.
- Applied spatial analysis to millions of commercial visitation records; found no measurable impact on surrounding Queens neighborhoods and developed a clear explanatory narrative for city agency stakeholders around why the effect was absent.

PROFESSIONAL EXPERIENCE

Center for Urban Science and Progress, New York University

New York, NY

Assistant Research Scientist — Resilient Urban Networks Lab

May 2024 – Jul 2025

- Managed end-to-end analytical workflows across two concurrent large-scale research projects, building and maintaining data pipelines, ensuring reproducibility, and coordinating deliverables from data acquisition through publication.
- Produced policy-ready briefings and reports for city agencies and nonprofit partners, translating geospatial and causal analysis findings into actionable planning and infrastructure investment recommendations.

Global Scholars Program, University of Michigan

Ann Arbor, MI

Assistant Instructor

Sep 2021 – Apr 2023

- Guided an 8-person student team through a pro bono consulting engagement with ALPHA Education, managing scope definition, client communication, and deliverable quality across the project lifecycle.
- Facilitated workshops on intercultural collaboration, DEI, and conflict resolution for a cross-cultural cohort.

RELEVANT SKILLS

Technical: Python, ArcGIS, GeoPandas, Machine Learning, Causal Inference, Quantitative Modeling, Data Visualization

Consulting: Report Writing, Stakeholder & Community Engagement, Client Communication, Research-to-Recommendation Translation
